
Term Project Deliverable 3

The Web-tier

Submission date - November 5, 2015

Team members

Seonmi Kim

Krupal Kapadia

Georgii Didok

The contribution of each team member

Every member of the team equally participated in examining the requirements and researching the related web technology / protocol. We produced the class and sequence diagram individually then merged them into one model based on the result of comparison and discussion.

Georgii Didok transformed the final model into Rational Rose.

Contents of our Rose model

- The complete class diagram of Web-tier in the project
- Sequence diagrams indicating
 1. web request where nothing goes wrong
 2. web request for which a session needs to be created
 3. web request of which a session times out
 4. web request of which requested web-page doesn't exist
 5. web request where error occurs on the server side
